

**Molecular Miracles**

CHEMISTRY TUITION · N5 · HIGHER · ADV HIGHER

# Logo & Brand Pack

Every version of your logo, and how to use them

CHEMISTRY TUITION · SCOTLAND

# The main logo

This is the version to reach for by default. Use it anywhere you have room for a wide logo — the top of your website, letterheads, worksheet headers, email signatures and banners.

## Molecular Miracles

CHEMISTRY TUITION • N5 • HIGHER • ADV HIGHER

Horizontal • full colour

Logo-Horizontal.png / .svg

## Molecular Miracles

CHEMISTRY TUITION • N5 • HIGHER • ADV HIGHER

Horizontal • reversed, for dark backgrounds

Logo-Horizontal-Reversed.png

The PNG files have a **transparent background**, so they sit cleanly on white, on a pale tint, or over a photo.

## When space is narrow

Use the stacked version when the wide logo would have to shrink too far — square social posts, a profile header, the corner of a flyer, or anything portrait-shaped.

**Stacked**

**Stacked · reversed**

The stacked lockup drops the level list and keeps just *Chemistry Tuition*, so it stays readable at smaller sizes.

# Your MM monogram

The hexagon is a benzene ring — the first structure every Chemistry pupil learns to draw. Your initials sit inside it, with a gold spark on the corner for the “miracle”. Use the mark on its own wherever the full name would be too small to read.

Mark · full colour

Mark · white

Social profile picture

App icon / favicon

# Your palette

Six colours, and that is deliberate. Teal is the one people will remember you by — let it lead, and keep gold for the spark.

## Teal

#12A594

Primary brand colour. Headings, links, ticks, highlights.

## Blue

#3B82F6

Mid-point of the gradient. Buttons and accents.

## Violet

#8B5CF6

End of the gradient. Use sparingly.

## Gold

#F0A500

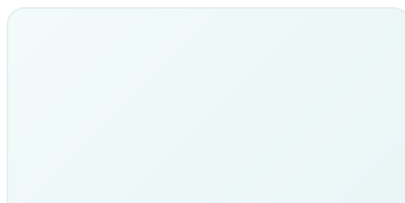

The spark only. Stars and small highlights.

## Deep ink

#0E3B47

All headline and body text on light backgrounds.

## Soft tint

#F3FAFA

Alternating section backgrounds and cards.

## The signature gradient

```
linear-gradient(115deg, #12A594, #3B82F6 50%, #8B5CF6)
```

Teal → blue → violet, running left to right. It is in the logo, the buttons and the underline. Reuse it and everything you make will look like it belongs together.

# Two fonts, no more

Both are free on Google Fonts, so you can install them on your own computer and use them in Word, Canva and anywhere else.

## HEADINGS · PLAYFAIR DISPLAY, SEMIBOLD

# Chemistry that finally clicks

ABCDEFGHIJKLMNOPQRSTUVWXYZ · abcdefghijklm · 0123456789

A serif with real personality — it gives you the “qualified teacher” feel without looking stuffy. Use it for headlines and section titles only, never for long paragraphs.

## BODY TEXT · POPPINS, REGULAR & MEDIUM

Small-group SQA Chemistry tuition with Lynsey Robinson — over 20 years teaching National 5, Higher and Advanced Higher.

ABCDEFGHIJKLMNOPQRSTUVWXYZ · abcdefghijklm · 0123456789

Clean, round and very easy to read on a phone. Everything that is not a headline is set in Poppins. Use Medium for small labels and the odd bold word, Regular for everything else.

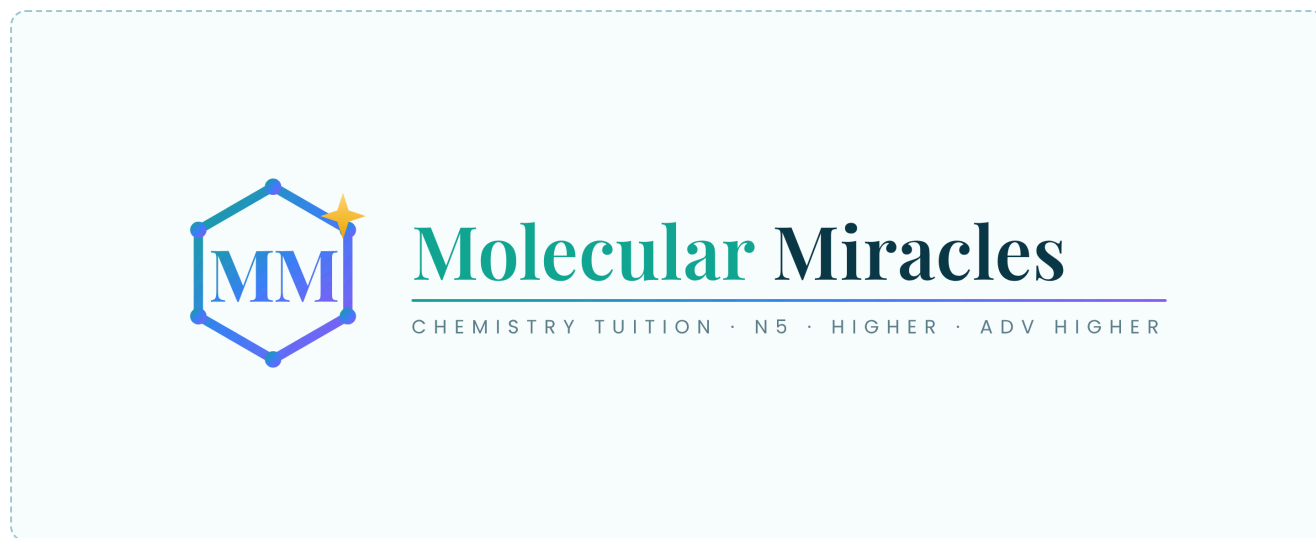

## SMALL CAPITALS

SQA CHEMISTRY SPECIALIST · SCOTLAND

Poppins in uppercase with wide letter-spacing is the brand’s signature label style. It is on the website badges and works well on flyers too.

# Give it room to breathe

Keep clear space around the logo equal to the height of the hexagon. Nothing — no text, no photo edge, no border — should come inside that margin.

The dashed line shows the minimum clear space

## Minimum sizes

These thumbnails are printed at the actual minimum size. Below this the tagline stops being legible — switch to the stacked logo, and smaller still, the mark on its own.

# Do and don't

A logo earns its value by being used the same way every single time. These are the only rules that really matter.

## Do

- ✓ Use the transparent PNG or the SVG so there is no white box behind it
- ✓ Use the reversed version on anything dark
- ✓ Keep it flat — no drop shadows, no glow, no outline
- ✓ Scale it by dragging a corner so the proportions stay locked
- ✓ Use the SVG for anything going to print — it stays sharp at any size
- ✓ Put it on white, on the pale tint, or on a calm part of a photo

## Don't

- ✗ Stretch or squash it to fit a space
- ✗ Recolour it, or rebuild the gradient in different colours
- ✗ Rotate or tilt it
- ✗ Put the colour version on a dark or busy background
- ✗ Move the MM, the hexagon or the spark apart from each other
- ✗ Retype the name in a different font next to the mark
- ✗ Add a border, a circle or a box around it

### If you only remember one thing

Use the files exactly as they are. Every time you resist the urge to tweak it, the logo gets a little more recognisable to the parents who have seen it before.

# What to use where

---

## Instagram

Profile picture: **ProfilePicture.png**. It is already square and centred, so nothing gets cropped off.

## WhatsApp Business

Same file — **ProfilePicture.png**. WhatsApp crops to a circle, and the mark sits safely inside it.

## Worksheets & past papers

**Logo-Horizontal.png** in the header, or **Icon.png** small in the corner so it does not distract from the questions.

## Email signature

**Logo-Horizontal.png** at around 180 px wide. Any smaller and the tagline will not read.

## Printed flyers & posters

Always **Icon.svg** or the full-size PNG. Never a screenshot — it will print blurry.

## Google Business Profile

**AppIcon-1024.png** for the logo slot, **ProfilePicture.png** for the cover.

## Zoom & online lessons

Use **Logo-Horizontal.png** on a plain background as your virtual backdrop, or set it as your Zoom profile picture.

## Business cards

**Icon.svg** on the front, **Logo-Stacked.png** on the back. Ask the printer for vector — they will thank you.

# Full file list

| FILE                         | WHAT IT IS                      | USE IT FOR                                           |
|------------------------------|---------------------------------|------------------------------------------------------|
| Logo-Horizontal.png          | Transparent PNG, 2445 px wide   | Website header, letterhead, email signature, banners |
| Logo-Horizontal-Reversed.png | White text version              | Anything on a dark background                        |
| Logo-Stacked.png             | Transparent PNG, 1701 px wide   | Square posts, flyers, narrow spaces                  |
| Logo-Stacked-Reversed.png    | White text version              | Dark backgrounds, narrow spaces                      |
| Icon.png                     | Mark only, transparent, 1500 px | Watermarks, worksheet corners, stickers              |
| Icon-White.png               | Mark only, white, transparent   | On photos and dark colours                           |
| Icon.svg                     | Vector master                   | Print, signage, embroidery — any size, always sharp  |
| Icon-White.svg               | Vector master, white            | Print on dark                                        |
| ProfilePicture.png           | 2700 × 2700 square              | Instagram, Facebook, WhatsApp Business               |
| AppIcon-1024.png             | 1024 × 1024 square              | App stores, Google Business Profile                  |
| Favicon-512/180/32.png       | Square, three sizes             | Browser tab icon and phone home screen               |

Every file name begins MolecularMiracles-. PNG files have transparent backgrounds unless the name says Reversed or Applcon. SVG files are vector — the letters are converted to outlines, so they open correctly on any computer whether or not the fonts are installed.

## This logo is yours

Use it on anything you like — worksheets, socials, flyers, signage, merchandise. If you ever need a version that is not in this pack, just ask.
